

RCP/RCLM Theorem Dependency Graph

1	Conditional Non-Lossy Self-Update Preservation	feeds into
2	Conservative-Extension Algebra	feeds into
3	Direct-Engine Construction	feeds into
4	Seed-Domain Entry / Witness Libraries	feeds into
5	Successor-Verification Seed Domains	feeds into
6	SV Packet Construction and Closure	feeds into
7	Finite/Infinite Domain-Relative RRS	feeds into
8	Batch 13R Reference Entry	feeds into
9	Batch 13R-A Concrete Canonical Witness	feeds into
10	Batch 13R-B Controlled Artifact + Mechanization Boundary	feeds into
11	M3-Min Learned-Entry Boundary	final boundary

Lean scope: the Lean 4 project checks the canonical finite RCP core and the RCLM refinement module; it does not mechanize the full dependency graph.
